## 3.0

*"IMAGINE 2100. DESIGN WHAT COMES NEXT"*

## THE ORACLE CHALLENGE

### ROUND 01 – MINI TASK

#### OFFICIAL TASK BRIEF — FOR PARTICIPANTS

ORGANIZED BY BCS STUDENT CHAPTER  
GENERAL SIR JOHN KOTELAWALA DEFENCE UNIVERSITY (KDU)

EDITION: 3RD EDITION (2026)  
ROUND: ROUND 01 — THE ORACLE CHALLENGE  
TOPIC: TRANSPORTATION 2100  
PREPARED FOR: ALL REGISTERED PARTICIPANTS & TEAMS  
SUBMISSION WINDOW: 18TH SEPTEMBER – 20TH SEPTEMBER 2026

# 1. Cre8x 3.0 — Overall Theme & Philosophy

## The Three-Step Design Journey

As you approach this challenge, you are expected to follow this design process:

- Understand the human need — Identify who is actually affected by the system you are designing, including those often overlooked.
- Challenge the current system — Question existing assumptions about how the system currently works and who it currently serves.
- Prototype a meaningful future — Translate that understanding into a working, tangible design solution.

This philosophy is not merely competition branding — it is directly embedded into the judging criteria (see Section 3), particularly under Accessibility and Innovation. Keep it in mind at every stage of your design process.

## 2. Round 01 — The Oracle Challenge [Mini Task]

### 2.1 Topic: Transportation 2100

You are required to design a futuristic digital platform that helps people plan and manage journeys across an advanced smart-city transportation network in the year 2100 — including autonomous buses, autonomous trains, air transport, and smart roads.

This is a deliberately broad and ambitious topic, intended to test how well you can design a coherent, unified experience across multiple interconnected transport systems, rather than a single simple app.

### 2.2 Task Objective

Your experience must make travelling simple, efficient, safe, and accessible. Specifically, your platform should help users:

- Discover routes across multiple modes of transport (bus, train, air, smart roads)
- Manage journeys from planning through to completion
- Receive real-time updates on delays, arrivals, and transfers
- Interact with different transport modes through a single, seamless, unified experience — rather than separate disconnected tools for each mode

## 2.3 Theme Connection — Critical Context

As transportation becomes fully automated and AI-driven in the imagined world of 2100, it becomes very easy to design only for tech-savvy users who are comfortable navigating complex digital systems.

Cre8x 3.0 pushes you to design a single transit experience that works seamlessly for the widest possible range of people — not a specialized tool built around one type of user, but a platform simple and intuitive enough that anyone can use it naturally, regardless of age, ability, or comfort with technology. The strength of your design should come from how effortlessly it works for everyone at once, rather than from features built to target any one specific group.

### IMPORTANT NOTE FOR PARTICIPANTS

This round will not be evaluated purely on visual polish. A central part of the evaluation is whether your accessibility thinking is genuine and thoughtfully integrated into the actual user flow — not just a surface-level mention or a token accessibility toggle button.

Aim to build in real inclusive design decisions: simplified navigation paths, clear visual hierarchy, larger text/touch targets, plain-language content, and alternative ways to complete key actions.

## 2.4 Platform Requirements

- You must build a real, working front-end web application (a backend/database is not required).
- Any framework or tool may be used — React, HTML/CSS/JavaScript, Vue, or any other front-end technology.
- Your application must be hosted on a free hosting service — examples include Vercel, Netlify, or GitHub Pages.
- Your application must be fully mobile responsive. This is a hard requirement, not optional — judging will be conducted primarily on mobile view, so test and refine your app on a mobile device or a mobile-simulated browser view first.

## 2.5 Required Screens (Mandatory — 3 Total)

| No. | Screen                  | Purpose & What Will Be Evaluated                                                                                                                                                                                                   |
|-----|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1   | Home Screen             | Entry point of the app where users search for or discover journeys across <b>bus, train, air transport, and smart roads</b> . Focus on how intuitively a first-time user can start planning a journey.                             |
| 2   | Journey / Route Details | Displays the selected route, transport modes, and real-time updates such as <b>delays, arrival times, and transfer information</b> . Focus on clear information hierarchy and whether critical information is immediately visible. |
| 3   | Live Map / Tracking     | Provides real-time visual tracking of the vehicle or journey through a <b>map-based interface</b> . Focus on clearly communicating the tracking status, even to users unfamiliar with map-based apps.                              |

You are permitted to add extra screens beyond these three if doing so strengthens your overall concept, but these three screens are strictly mandatory for your submission to be considered complete.

## 2.6 Delivery Requirements

You must submit the following two components:

- **Live Hosted Link** — A working, publicly accessible link to your deployed web application.
- **Short Report (PDF)** — Maximum 6 pages, filename must be TeamName.pdf (for a team) or YourName.pdf (for a solo entry), matching the name used during registration. This report must include: your team name; an introduction describing your team's concept and design reasoning; mobile screenshots of all three required screens (and any additional screens, if included); and the live hosted link, included again within the report as a backup reference point.

### CRITICAL NOTE FOR PARTICIPANTS

Per the official rules, submissions without a live hosted link, or without mobile screenshots, will not be considered complete — regardless of design quality. Double-check that both components are present before you submit.

## 3. Judging Criteria — Full Breakdown (100 Points Total)

Use this breakdown to guide where you invest your time and effort.

| Criteria              | Points | What Will Be Evaluated                                                                                                                                                                                        |
|-----------------------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Usability             | 20     | Ease and intuitiveness of navigation; whether a first-time user can complete the journey <b>search → view route → track journey</b> without confusion or unnecessary steps; logical information architecture. |
| Aesthetics            | 20     | Visual appeal and professionalism; consistency in colors, typography, spacing, and iconography; cohesive <b>“2100” futuristic</b> visual style.                                                               |
| Innovation            | 15     | Originality and creativity, especially AI integration such as predictive routing, smart rebooking, and personalized accessibility settings; genuinely novel features.                                         |
| Accessibility         | 15     | Meaningful inclusion of elderly, disabled, and less tech-confident users; legible fonts, sufficient contrast, simple flows, large touch targets, plain-language microcopy, and alternative interaction paths. |
| Functionality         | 15     | Practical and complete user flow; all three required screens work as intended; functional buttons, links, and navigation; prototype behaves like a real product.                                              |
| Mobile Responsiveness | 15     | Adaptability to mobile screen sizes; no layout breakage, overlapping, or text truncation; appropriately sized touch targets for finger interaction.                                                           |
| TOTAL                 | 100    |                                                                                                                                                                                                               |

## 4. Competition Timeline (Full Schedule)

Use this breakdown to guide where you invest your time and effort.

| Date         | Milestone                              | Details                                                                                         |
|--------------|----------------------------------------|-------------------------------------------------------------------------------------------------|
| Sep 2, 2026  | Registration Opens                     | Open to solo participants and teams of 2–4 undergraduates                                       |
| Sep 10, 2026 | Awareness Session                      | Virtual orientation session for prospective competitors and registered teams                    |
| Sep 15, 2026 | Registration Closes                    | Final date for entering the competition                                                         |
| Sep 18, 2026 | The Oracle Challenge (Round 01) Opens  | Online UI/UX design challenge begins — testing creative problem solving and 2100 product vision |
| Sep 20, 2026 | The Oracle Challenge (Round 01) Closes | Final submission deadline for the mini task                                                     |
| Sep 24, 2026 | Final Workshop                         | Virtual mentoring workshop for shortlisted participants ahead of the Grand Finale               |
| Oct 2, 2026  | Finalists Announced                    | Top shortlisted entries (teams and solo participants) officially announced                      |
| Oct 11, 2026 | The Olympus Finale                     | 8-hour live design challenge, pitch presentation, and award ceremony held at KDU premises       |

Venue for the Grand Finale (Olympus Finale): Faculty of Graduate Studies, KDU, Kandawala Road, Ratmalana.

## 5. Submission & Eligibility Notes

### Submission Rules

- Upload your PDF report directly through the official Google Form — no ZIP file required. Use TeamName.pdf for a team or YourName.pdf for a solo entry.
- The name used in the PDF file must match the name used during registration.

#### IMPORTANT SUBMISSION RULES

If several files are submitted under the same team or participant name, only the earliest upload will be treated as the official submission. Later uploads will not replace it.

Submissions received after the official deadline on 20 September 2026 will not be accepted.

### Completeness & Selection

- A submission without a working live hosted link or the required mobile screenshots will be considered incomplete and will not be evaluated.
- Only the top-performing submissions from The Oracle Challenge will advance to the Olympus Finale.

## Registration & Grand Finale Scoring

Your registration for Cre8x 3.0 is only formally confirmed once your team's or your individual mini task submission has been received – registration alone does not guarantee a confirmed slot

***“The future is not found. It is designed.”***
